

# SPECTRE PRO RGB

As a brand, BitFenix is best known for unique PC cases and modding accessories, always striving to provide high-quality PC components and offering diversity for modders and gamers alike. Today, BitFenix is proud to announce its latest addition to the Spectre™ fan series, the Spectre™ Pro RGB.

The Spectre™ Pro RGB sports a centered LED lighting based on the TriBright™ LED Technology known from our Alchemy 2.0 Magnetic RGB Strips. It offers a longer product life and higher color saturation in addition to increased brightness due to a more evenly scattered light, thus improving the overall illumination effect.

As a direct successor to the Spectre™ Pro, the Spectre™ Pro RGB is a high performance silent fan, featuring a high-pressure CFM design for maximum pressure and airflow, delivering a torrent of air to keep systems cool. It is equipped with reinforced fan-blades to assure they resist warping even while spinning at high-speed for long durations, thus providing durability and longevity. The fluid dynamic bearing technology will keep the fan silent, even during heavy load.

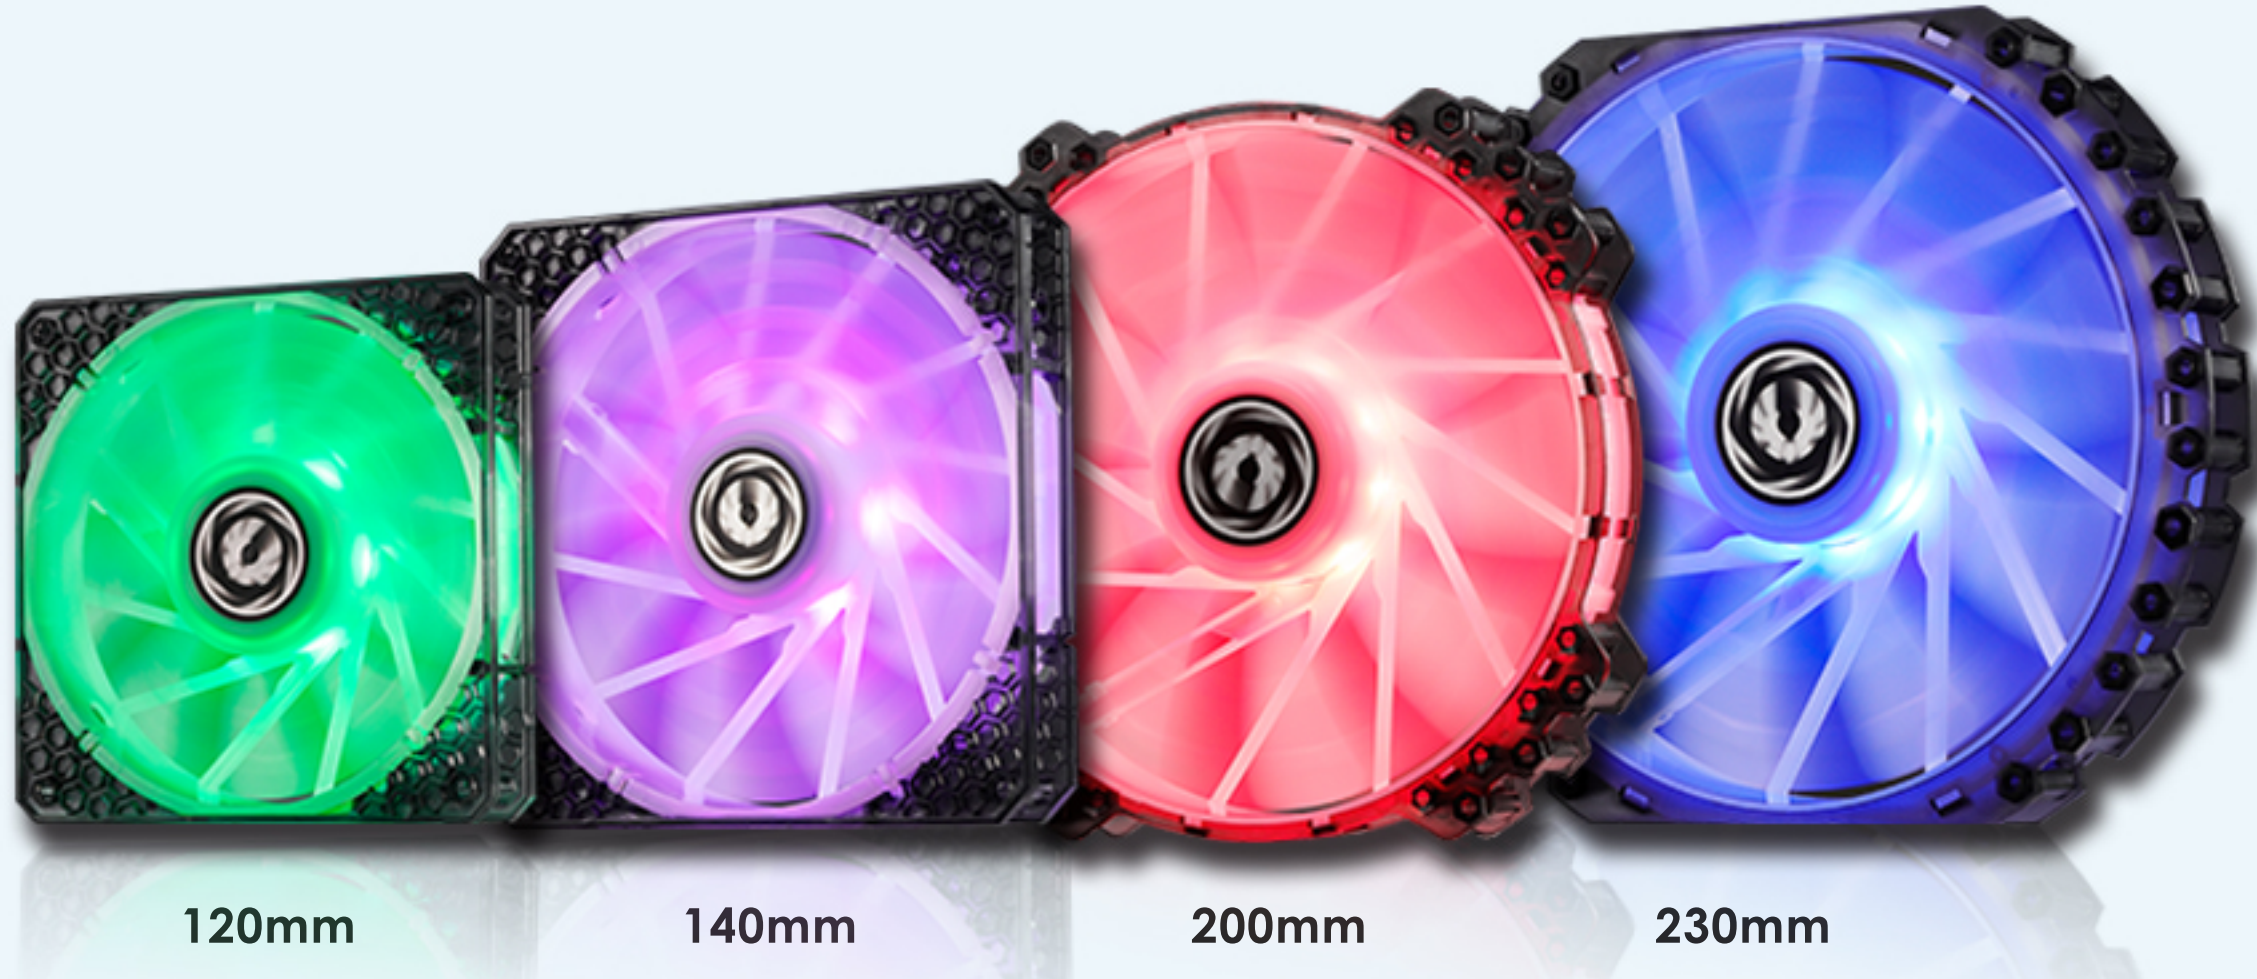

SHOGUN

AURORA

The Spectre™ Pro RGB comes with an optional controller, but is also compatible to ASUS AURA SYNC and to other static RGB products from BitFenix, such as the cases Aurora or Shogun. To provide utmost versatility and diversity, the Spectre™ Pro RGB is available with or without controller in sizes from 120mm up to 230mm.
